Description Text	<input type="text"/>

- **Module Class Suffix** - A suffix to be applied to the css class of the module (table.moduletale), this allows individual module styling;
 - **SWFObject script** - **Mode 1** will use a local copy. **Mode 2** will use the file hosted by Google. **Mode 3** will disable insertion but it will use the code;
 - **Debug Mode** - No (Recommended);
 - **Multiple Instances** - This parameter allow to load multiple instances of the same module on the same website.
- How It Works:** Make a copy of this module. After that, in the new copy set this parameter to "**Copy 1**"! Same, for other instances, but set this parameter to "Copy 2, Copy 3".

GLOBAL SETTINGS:

- **Global Width** - Set up the global stage width, the actual width of the flash animation;
- **Global Height** - Set up the global stage height, the actual height of the flash animation;
- **Image Width** - Set the width of image;
- **Image Height** - Set the height of image;
- **Cube Rotation** - Set the cube transition (Random, Vertical, Horizontal);
- **Button Color** - Choose the buttons color;
- **Button Distance** - From here you can set the Y position (distance from the bottom), for the buttons. Default is: -100;

- **Shadow Distance** - From here you can set the Y position (distance from the top), for the shadow. Default is: 2;
- **AutoPlay** - Yes or No - to define if the sliding will occur automatically on the startup;
- **Arrow Button** - Show the arrow buttons or not;
- **Slider Time** - You can set the image duration time (seconds).

IMAGE SETTINGS:

- **Enable Image** - Choose if you want to enable or disable a specific image;
- **Choose Image** - Select (upload) or specify the location of the image that should be loaded in the slide;
- **URL Link** - Insert a link for this image. Leave empty if you don't want a link on the image;
- **Link Target** - Target for URL link (New Window or Same Window);
