

MAGIC GRID SLIDER

Magic Grid Slider is a dynamic photo gallery, which can give your site a better image. With just three clicks on the image, your visitors will be able to choose if they want to hide/show controllers or to display image descriptions. It's very easy to use and integrate into your Joomla website.

Features:

- Supports images (JPG, PNG, GIF);
- You can change the font size & color for title and content;
- You can set the images time;
- You can set the grid rows & columns;
- You can add a link for each description text and choose the target;
- You can choose two effects transitions for each image (In or Out);
- You can choose five effects directions for each image (Up/Down/Left/Right/Center);
- Default status bar with three options (Hide/Only Controllers/Controllers and Info);
- Support special characters (âùæçèèëîïôœüÛÜÙÇÊÔÏËËËËÇÆÄÀ);
- Autoplay, Effect Speed and Delay settings;
- Super easy to use!

Note: All images must have the same size you have set in back-and!

New Feature: From now you have possibility to load multiple instances of the same module on the same website!!!

This module contains 17 (seventeen) predefined images, **maximum 17**.

Troubleshooting: For any assistance, please do not hesitate to contact our support team.

Compatibility with Joomla:

Module Class Suffix

SWFObject script Mode 1 (local) Mode 2 (Google) Mode 3 (Disable)

Debug Mode ▼

Multiple Instances ▼

Global Settings

Global Width

Global Height

AutoPlay ▼

Slider Time

Grid Row

Grid Column

Effect Speed

Effect Delay

Status Bar ▼

- **Module Class Suffix** - A suffix to be applied to the css class of the module (table.moduletable), this allows individual module styling;
- **SWFObject script** - **Mode 1** will use a local copy. **Mode 2** will use the file hosted by Google. **Mode 3** will disable insertion but it will use the code;
- **Debug Mode** - No (Recommended);
- **Multiple Instances** - This parameter allow to load multiple instances of the same module on the same website.
How It Works: Make a copy of this module. After that, in the new copy set this parameter to "**Copy 1**"! Same, for other instances, but set this parameter to "Copy 2, Copy 3".

GLOBAL SETTINGS:

- **Global Width** - Set up the global stage width, the actual width of the flash animation;
- **Global Height** - Set up the global stage height, the actual height of the flash animation;
- **AutoPlay** - Select auto play feature. It can pass to next image automatically in a specified time;
- **Slider Time** - You can set the image duration time (in seconds);
- **Grid Row** - Set the number of rows when the image is changing;
- **Grid Column** - Set the number of columns when the image is changing;
- **Effect Speed** - The speed of the transition effect (in seconds). **Default is: 1;**
- **Effect Delay** - Here you can set the load time of each row (seconds). **Default is: 0.02;**
- **Status Bar** - Choose how to show status bar, when the module is loading for first time (Hide / Only Controllers / Controllers and Info).
EXAMPLE: If you choose to set Status Bar on HIDE (without controllers and info text), then to first click on image, will show module menu controls (play, puse, forward ...), two clicks displays image info (image title and image description), and three clicks, will hide all again (description and controls).
