

Wonderful Image Slideshow

A professional looking, elegant image/swf slideshow. Very adaptive and easy to use, this module is the perfect choice for displaying category items or product brands, or just like a wonderful personal image slideshow. You can easily make a cool slideshow as the one in this preview.

Features:

- Supports images (JPG, PNG, GIF) and SWF;
- Enable / Disable: Each Slide;
- New: you can enable or disable the background;
- Can automatically restart at end if requested;
- Ability to set initial delay and final delay makes it perfectly adaptive;
- SUPER easy editing;
- Can assign URL links to each image;

Note: This module only works with images and swf. If you want to put text, it must be rendered as png, jpg, gif or swf.

New Feature: From now you have possibility to load multiple instances of the same module on the same website!!!

This module contains 25 (twenty five) predefined images. **Maximum 25**

Troubleshooting: For any assistance, please do not hesitate to contact our support team.

Multiple Instances

Global Settings

Width

Height

Background Yes No

Repeat Yes No

Image 1 Settings

Enable Image Yes No

Choose Image

Image Link

Image Align

Start Delay

End Delay

Rotation

XOffset

YOffset

- **Module Class Suffix** - A suffix to be applied to the css class of the module (table.moduletable), this allows individual module styling;
- **SWFObject script** - **Mode 1** will use a local copy. **Mode 2** will use the file hosted by Google. **Mode 3** will disable insertion but it will use the code;
- **Debug Mode** - No (Recommended);
- **Multiple Instances** - This parameter allow to load multiple instances of the same module on the same website.
How It Works: Make a copy of this module. After that, in the new copy set this parameter to "**Copy 1**"! Same, for other instances, but set this parameter to "Copy 2, Copy 3".

GLOBAL SETTINGS:

- **Global Width** - Set up the global stage width, the actual width of the flash animation;
- **Global Height** - Set up the global stage height, the actual height of the flash animation;
- **Background** - Enable or Disable the gray background;
- **Repeat** - If you want the image/swf rotator to automatically repeat itself at the end, set its value to 'YES', or NO if you want it to simply stop;

IMAGE SETTINGS:

- **Enable Image** - Choose if you want or not to enable a specific image;
- **Choose Image** - Select (upload) or specify the location of the image that should be loaded;
How add SWF?
For the **Choose Image** parameter push the **Select** button and in the pop-up window insert the swf path in the **Image URL** field and push the **Insert** button!
- **Image Link** - Insert a URL link. Leave empty if you don't want a link over image;
- **Image Align** - The alignment of the content to be displayed on screen;
- **Start Delay** - The number of seconds delay, to display the current content. Make sure that this delay is relative to the time the banner was initially started;
- **End Delay** - The number of seconds delay, to create the closing animation of the current content. This time delay is relative to the time the current content was completely displayed on screen;
- **Rotation** - You can set its value to 'RANDOM' if you want random rotations everytime or manual set (0 to 360 degrees);

- **XOffset** - You can set xOffset's value positive or negative according to your need to center bigger images on screen. (xOffset moves image left or right);
- **YOffset** - Same as 'xOffset' but moves image up or down.
